SAFETY NETS: KEY POINTS

A fall from a height is likely to result in a serious injury. By installing safety nets below a high-level work area, there is less likelihood that the person will be injured if they fall.

- ▶ Safety nets installed below a high level work area reduce the distance a person can fall.
- ▶ Safety nets are designed to deflect and absorb the energy of a fall so they reduce the likelihood of a person being injured.
- ▶ There must be enough clear space below the net so that as the net deflects, the person who has fallen does not strike an obstacle or the ground.
- ▶ Safety nets allow people to work at height without restricting their movement.

WHY INVEST IN SAFETY NETS:

Ensuring construction safety is a shared responsibility that benefits everyone involved. It not only protects workers but also boosts productivity and efficiency. Statistics show that a safe work environment leads to on-time project completion without the extra costs of delays. Among the various risks in the construction industry, accidents from falls and falling materials are the most deadly.

To manage these risks, a proactive approach is necessary. This includes carefully identifying hazards, assessing risks, and minimizing activities at heights where falls are a danger. Investing in systems that meet EN and OSHA standards is crucial. These systems, which include preventive and protective measures, help enhance overall safety on-site.

22. GARWARE SAFETY NETS

- PPMF Safety reduces risk of injury by deflecting and absorbing energy from falling objects
- Easy to clean due to low moistening characteristics in the Industrial Grade Yarns.
- **High Quality fabricated netting:** Audit advantage & high brand value of builder / Ensure 100% functional delivery
- **Approval and Certification:** Testing Criteria for Safety Nets as per EN 1263 – 1
- Permanent knot tightening upon net impact is not applicable to knotless nets. (Permanent knot tightening reduces the amount of energy the net can absorb)
- Longer lifespan than braided nets due to high UV%
